

Why Grandstream's DP715/710 DECT IP Phones

1 VOIP MOBILITY

Be mobile throughout your home, office, or business

Place DECT phones around your business, office, warehouse, store, or home. Take a handset with you so you can walk away from your desk, go to your colleague's office, hang out in the backyard, or do anything away from your phone line without missing any important calls. With a range of 50 meters indoors and 300 meters outdoors, and a 200 contact phonebook built into every handset, you will also have direct access to your full suite of contacts on-the-go.

2 UP TO 5 HANDSETS, UP TO 5 PHONE NUMBERS FROM UP TO 2 SERVICE PROVIDERS, 4 CONCURRENT CALLS

Ultimate Flexibility and Customization in creating your DECT system

Each DECT system can be set to make and receive calls using up to 5 different phone numbers, from up to 2 different service providers, and can make 4 calls concurrently. Each handset in your DECT system can make and receive calls using the same phone number or set each of up to 5 handsets to make and receive calls using different phone numbers. Connect your DECT system to phone lines registered with up to 2 service providers for the ultimate flexibility.

3 CUSTOM RING OPTIONS

Make sure important calls are always heard and answered

Design your business or home phone system so that incoming calls are distributed throughout the office in many different ways and orders – and the first pickup gets the call. When handsets are registered to a common phone line, use the Hunting Group feature to customize your ring pattern. Linear Mode allows all handsets to ring in your predestined order until the call is answered, and Parallel mode allows all handsets to ring concurrently and after one handset picks up, the remaining handsets can make other calls. Each handset can be set to use a completely different ring tone.

4 ADVANCED VOIP SECURITY

Just because they're cordless doesn't mean someone can snoop in on your calls

Just because they're cordless doesn't mean people are snooping on your phone calls. Grandstream DECT phones feature the most advanced IP telephony encryption on the market which specifically eliminates pirating by encrypting your account info so it cannot be stolen (TLS), and encrypts conversations so no one can listen in on your phone calls (SRTP).

5 FAMILIAR CONFIGURATION, MANAGEMENT, AND CALL FUNCTIONS

Use and Configure the same way you are used to

Use the exact same functions, commands, and management tools that you already know and love from Grandstream to manage your Grandstream DECT system – there is no new, complicated system to learn. We built our DECT phones to function the same way our ATAs do. Perform call functions such as transfer and forward the same way you are used to, and also customize, personalize, and manage your Grandstream DECT system as simple as the click of a mouse with our simple web-based interface.

6 FAILOVER SIP SERVER

Continuous, Uninterrupted Phones Service

Ensure that you and your customers always receive uninterrupted, continuous phone service with the secondary SIP server we built into our DECT IP Phones. If your platform goes through routine maintenance or your DNS server or main SIP server collapses, Grandstream's DECT IP Phones have a field that you can auto-provision to automatically switch your DECT IP phones to a secondary SIP server with no interruption or human intervention.
